

## FM1022

## 619 to 5925 MHz DPDT SWITCH

### Features

- Broadband frequency range: 619 to 5925MHz
- GPIO interface
- RoHS compliant package
- Compact 1.1mm x 1.5mm x 0.45mm QFN 10-pin package, MSL1

### Applications

- 2G/3G/4G/5G antenna swapping

### Description

- The FM1022 is a CMOS, Silicon-On-Insulator (SOI) double-pole, double-throw (DPDT) switch. The switch provides high linearity performance, low insertion loss and high isolation.
- Switching is controlled by one control voltage pin, VCTL. Depending on the logic voltage level applied to this pin, the RF1 and RF2 pins connect to one of the two other RF3 and RF4 pins through a low insertion loss path, while maintaining a high isolation path to the alternate port, ANT. No external DC blocking capacitors are required on the RF path as long as no DC voltage is applied externally.
- The FM1022 DPDT switch is provided in a QFN 10-pin, 1.1mm x 1.5mm x 0.45mm package. The functional block diagram and the pin configuration are shown in Figure 1. Signal pin assignments and functional pin descriptions are provided in Table 1.

**NOTICE:** Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

### ESD Sensitivity

Integrated circuits are ESD sensitive and can be damaged by static electric charge. Proper ESD protection techniques should be applied when devices are operating.

### RoHS Compliant

This product does not contain lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBB) and polybrominated diphenyl ethers (PBDE), and is considered RoHS compliant.
